

Musa Plus

Digital clock thermostat for electric towel heaters based on fluid heat transfer. The device can be configured with a weekly program specific for each day of the week. The temperature is controlled by means of a room temperature sensor. The device has a wide backlit display for a detailed view over the selected operative mode and the active functions, and it can be coupled to several easily replaceable heating element types obtainable from main European manufacturers. **MUSA PLUS** also provides the useful “open window detection” function for optimising energy consumption. An IR receiver allows to comfortably configure the device through the optional remote controls (“**Helios**” and “**Galaxy**”).

MUSA PLUS meets Eco-design Directive for local space heating.

Technical specifications

Operational modes	Comfort, Night, Antifreeze (7°C), Boost2h, Stand-by, Fil-Pilote (for Class II model only), Chrono, Key Lock, Open Window Detection 
Conformity marking	CE
Supply voltage	230 VAC - 50 Hz
Maximum power	2000 W
Selectable temperature range	7°C ÷ 32°C
Appliance classes	Class I – Class II
IP protection	IP44
Size	131mm x 76mm x 42mm
Available colours	White, Chrome
